

Solution Hypothesis

GOAL

Create a solution hypothesis that **connects your solution** to measurable outcomes.

STEPS

Have one team member share their screen, and together:

1. Examine the Examples

- A hypothesis prompt template
- Tiny Acts of Discovery
- Quantitative & Qualitative Metrics

2. Generate or Write a Hypothesis

Use any technique you have learned in class or elsewhere to help you construct a solution hypothesis statement.

3. Review, Finalize, & Post

As a team, discuss, review, modify, and improve the hypothesis statement so it is ready for you to present to the rest of the class.

EXAMPLE HYPOTHESIS PROMPT TEMPLATE

Epic IF/THEN Hypothesis Template

****If we**** [an action or a solution on behalf of the target persona]
****for**** [the target persona of the action or solution]
****Then we will**** [the desirable outcome or job-to-be-done for the target persona].

Tiny Acts of Discovery Experiments

****We will test our assumption by:****
* [experiment 1]
* [experiment 2]
* [add more experiments as necessary]

Validation Measures

****We know our hypothesis is valid if within**** [timeframe in days or weeks] ****we observe:****
* [desirable quantitative, measurable outcome]
* [desirable qualitative measurable outcome]
* [add more outcomes as necessary]

EXAMPLES OF TINY ACTS OF DISCOVERY

Quick Surveys: Validate audit team pain points with manual review and missed insights.	Market Check: Analyze how peer firms use AI in assurance or advisory services.	Synthetic Audit Files: Simulate risk scenarios and test AI detection capabilities.	AI-generated Narratives: Generate and review audit summaries or risk memos.	Rapid Audit Review: Time how long it takes to find key risks in real client files.	Excel Model Tests: Model time savings from reduced rework or data entry.
Data Mining: Analyze prior audit files for insight reuse or pattern misses.	Knowledge Journey Mapping: Visualize how teams currently retrieve past findings.	Sentiment Listening with AI: Analyze internal Slack or survey data on audit tool fatigue.	Generative AI POC: Prototype clause extraction or audit risk flagging in CroweMind.	Visit Risk & Legal: Confirm explainability & defensibility requirements for AI in audits.	API Exploration: Test how audit tools integrate with CroweMind or other systems in a day.

EXAMPLES OF QUALITATIVE & QUANTITATIVE METRICS

50% of auditors adopt Crowe Ignite in 30 days	30% fewer review-stage rework cycles in 1 quarter	Audit cycle time drops 15% in 3 months	75% use AI summaries in final deliverables by month 2	40% reduction in manual formatting tasks in 60 days	85% report easier risk detection in 1 quarter
70% reuse prior flagged insights in 2 quarters	95% accuracy in AI anomaly detection in pilot audits	Review cycles shorten by 25% in 90 days	80% report easier insight retrieval in 6 weeks	Unstructured doc review time drops 35% in 8 weeks	90% feel more confident explaining findings with AI

IF/THEN STATEMENT

If we [an action or a solution on behalf of the target persona]
for [the target persona of the action or solution]
Then we will [the desirable outcome or job-to-be-done for the target persona].

2 TINY ACTS OF DISCOVERY

We will test our assumptions by:

- 1.
- 2.
- 3.

1 QUANTITATIVE & 1 QUALITATIVE METRICS

We will know our hypothesis is valid when we observe:

- 1.
- 2.
- 3.

FINAL SOLUTION HYPOTHESIS STATEMENT

If we [an action or a solution on behalf of the target persona]
for [the target persona of the action or solution]
Then we will [the desirable outcome or job-to-be-done for the target persona].

We will test our assumption by:

1. [experiment 1]
2. [experiment 2]

We know our hypothesis is valid if within [timeframe in days or weeks] **when we observe:**

1. [desirable quantitative, measurable outcome]
2. [desirable qualitative measurable outcome]
